Written by Chad Macbeth
"""

# The input command only returns a string
# We must convert this to integer if needed

name = input("Please enter your name:")
age = int(input("Please enter your age:"))

print()    # Prints a blank line (can also do \n)
print("Hello {}, you are {} years old." .format(name,age))
print("On your next birthday, you will be {}." .format(age+1))
```
